AIS AssetTrack — End-to-End Process Flow

Returnable pallets · AIS plant → OEM / OES / AFM customer → AIS · one server for all plants · revised 21 Oct 2026 · server 1.37.2 · HHT 2.23.0

Scan step (HHT / gate) · AssetTrack function · Control check
External (Bench/ERP/EBS) · Customer HHT step · Normal end state · Exception

PLANTS & CUSTOMERS
From the Dispatch Bench (Oracle no.)
read-only · holding days kept here

USERS & ROLES
One server · plant chosen at sign-in
one permission per HHT button

PALLETS & TYPES
QR AIS-plant-type-serial-global
Type: value · HSN · L×W×H · weight

CUSTOMER HHT
Paired by QR · own staff sign-in
FortiClient VPN · works offline

HHT SETUP
Scanner only (no typing) or camera
BT printer: return slips only

INTEGRATIONS
Bench: SQL tables or API (auto)
GCS FTP per plant · Oracle challan

DISPATCH

Production → FGWH
pallet card scan
FGWH = centre for all FG

→ **Dispatch Bench**
plant-wise trip
picks LPN pallet.card

→ **Bench PDI**
Accepted · Hold · Pending
Rejected (final)

→ **ERP invoice + GCS**
GCS file to the plant's
FTP folder

→ **GCS inbox**
auto pull per plant
cancel · re-send · reopen

→ **PDI match?**
every card on one Bench
trip · PDI Accepted

yes → **Load sheet ready**
GCS + Bench trip = one
record · PDI sheet PDF

no → **HARD STOP – fix first**
no trip · not PDI OK · not invoiced

→ **No cards → vehicle link**
supervisor asks · admin approves

→ Load sheet ready

AssetTrack reads the Bench every 30 s · re-picked / rejected cards update the sheet
A cancelled GCS stops · re-sent by the ERP it opens again

HHT · Vehicle loading
scan GCS, then each
pallet QR · new labels ok

short → keep loading

Cards OK?
in GCS · PDI Accepted
not removed

no → **STOP – keep it off**

yes → **Last pallet?**
loaded = GCS pallets
→ finishes by itself

done → **Challan + gate pass**
Oracle challan · gate QR only
after finish · plant printer

Oracle EBS · e-way bill

→ **AIS OUT gate**
scan challan / gate QR
vehicle released

→ **AT CUSTOMER**
holding days start

PDI STATES
Accepted = loadable
Hold · Pending · not picked = wait
Rejected = removed for good
PDI done, not invoiced = hold out

CUSTOMER

Receive delivery
staff scan each pallet
while unloading

→ **Received / missing / extra**
visible to AIS

→ **Holding days · reminders**
mail before / after limit
escalation

→ **Return empty pallets · A**
when emptied · scan pallets
pick vehicle · customer DC

→ **Return slip printed**
BT printer · no. auto
signed QR (offline: RO-)

→ **Vehicle to AIS**
with slip, document
or nothing

Customer HHT works without network, sends when back on VPN

RETURN

Vehicle brings?

slip → **Scan return slip QR**
Option A (or offline RO- slip)

no slip → **Make slip B at gate**
count + document photo
(required) · read & matched
slip on BT printer

plant challan → **Scan plant challan**
other AIS plant: challan only

→ **Gate inward register**
IN gate · one entry no.
for every inward vehicle
+ GCS inward (ERP)

→ **Pallet yard receiving**
only gate-endorsed inwards
pallet QR only (no card)
A: vs slip · B: photo → count

→ **Reconcile**
received vs
slip / document

match → **AVAILABLE**
back in plant stock

other plant → **HELD – other plant**
owner plant alerted

mismatch → **Discrepancy queue**
short · extra · unknown
damaged · supervisor PIN

→ **Reports & dashboard**
plant position
at customer · aging
missed scans
customer receipts
Excel / PDF everywhere

INTERPLANT

Other-plant pallets
emptied in FGWH / Packing

→ **HHT · Yard-Out**
to the owner plant · scan

→ **Challan + e-way bill**
EBS / app challan

→ **OUT gate**
scan challan QR

→ **Owner plant IN gate**
scans the same challan

→ **Owner plant Yard**
scan each pallet

→ **AVAILABLE at home**

Rules: a GCS loads only when every part card is on one Bench trip with PDI Accepted · the gate QR is printed only after loading is finished · a cancelled GCS cannot be loaded
FGWH is the centre (no Production → Dispatch, no Dispatch ↔ Packing) · every inward is registered at the IN gate · the Yard takes pallet QR only · Option B needs a document photo
